

• AI AGENTS X CLIENT WORK

Let an AI email your *client*?

OpenAI's Dots just launched. Claude and Grok are in the same race. Here's the rule I'd use.

Swipe →

• THIS WEEK

OpenAI just shipped always-on agents

Dots work between your chats. Each gets its own cloud computer and plugs into 4,000+ apps like Slack. Work comes back for you to review.

Source: OpenAI DevDay launch, Sept 29 2026, as reported by TechCrunch and 9to5Google.

- WHY YOU SHOULD CARE

Clients judge your response time

Nobody sees your tools. They see how fast you answer, and whether the answer comes with a reason.

ILLUSTRATION

Client, Mon 9:02am

Why did CPA jump?

Agent, Mon 6:00am

Already flagged it

THE NEW BAR

An agent that has the answer before the question lands.

- SAME PROMISE, DIFFERENT BETS

Three agents, three bets

→ Dots: always on, works between chats

→ Claude Code: you stay in the loop

→ Grok Build: parallel agents, early beta

Early reviews split on benchmarks. Pick by how much control you want, not by a leaderboard.

• THE LINE

Agents draft. Humans send.

My rule from building these: anything that leaves the building gets a human's eyes first. Clients remember the one bad email.

IN ONE LINE

Let the agent do the work. Keep the send button.

• THE BAD-NEWS TEST

Would you phone them about it?

If you'd phone the client, don't let an agent write it. If you'd send the same note to 40 clients, automate it.

RULE OF THUMB

Bad news, pricing, apologies: you. Reports, reminders, status updates: agent drafts.

• NOT JUST THEORY

My Monday report builds itself

campaign-report-autopilot assembles the client report every Monday on GitHub Actions, with scale, keep, test and cut calls. A human still approves what leaves.

• SAVE THIS RECAP

What I'd hand over

Alone

Pull data, spot spikes

Draft only

Reports, check-in emails

You only

Bad news, pricing,
renewals

Your line may sit somewhere else. That's the interesting part.

• YOUR TURN

Where's your line?

Would you let an agent email a client? Say yes, no, or drafts only.

Comment your answer
